

## Spring Energy RRH, LLC d/b/a Spring Power & Gas Environmental Disclosure Statement

Power plants can generate electricity from a number of different fuel sources, resulting in different emissions. Spring Energy RRH, LLC will report fuel sources and emissions data to customers twice annually, allowing customers to compare data with other suppliers providing electric service in Maryland.

**Sources of Electricity Table**

Sources of Electricity Supplied from January 2023 to December 2023	Percentage of Total
Biomass Power	0.00%
Coal-Fired Power	14.94%
Hydro Power	0.96%
Natural Gas-Fired Power	44.2%
Nuclear Power	33.62%
Oil-Fired Power	0.27%
Solar Power	1.86%
Wind Power	3.55%
Other Resources	0.6%
<b>Total</b>	<b>100%</b>
The PJM System Mix represents all resources used for electricity generation in the region. All fuel mix and emissions data are calculated from the PJM System Mix. The sum of the individual fuel sources may not equal 100% due to rounding.	

### Air Emissions

<b>lbs/MWh Nitrogen Oxides (NO<sub>x</sub>), Sulfur Dioxide (SO<sub>2</sub>), and Carbon Dioxide (CO<sub>2</sub>) emitted from January 2023 to December 2023</b>	
<b>Carbon Dioxide</b>	<b>732.8</b>
<b>Nitrogen Oxide</b>	<b>0.25</b>
<b>Sulfur Dioxide</b>	<b>0.32</b>
Carbon Dioxide (CO <sub>2</sub> ) is a "greenhouse gas" which may contribute to global climate change. Sulfur Dioxide (SO <sub>2</sub> ) and Nitrogen Oxides (NO <sub>x</sub> ) released into the atmosphere react to form acid rain. Nitrogen Oxides also react to form ground level ozone, an unhealthful component of "smog."	

This disclosure is required by the Maryland Public Service Commission.
